

PIPES & BONGS

What do they look like?

Pipes and bongs are typically made of glass and can come in various colors.

The Numbers

It takes **5-10 seconds** for the THC to reach the brain and for the effects to be felt.

The high lasts between **30 minutes and several hours**.

The THC concentration in a pipe or bong depends on the **amount of cannabis flower used**.

Note

Inhaling smoke of any kind causes **damage to the respiratory system**.

Sharing these devices puts users at risk of getting herpes, mono, and colds.

What are pipes & bongs?

PIPES

In pipes, cannabis flower is burned and its smoke is inhaled.

BONGS

In bongs, cannabis flower is burned and its smoke is cooled through water before being inhaled.

The water used in bongs DOES NOT make them a safer way to inhale cannabis. The water only cools the smoke.
